

## Explanation

The SFP Health Check is designed to help Sustainable Food Places review and assess their progress by checking their current position against 6 Health Check categories representing their organisational structure and function.

The Health Check can be used by places as a basis for discussion and sharing perspectives on progress, and to help identify where effort needs to be focused or where support is required. It can also be used to help the Sustainable Food Places Network understand each city/place's progress and support needs.

The [SFP Health Check Tool](#) can be downloaded and used by SFP member partnerships as explained in the tool's introduction.

SFP support staff will also be exploring the facilitation of Health Check workshops and diagnostic processes based on guided and supported use of the Health Check Tool. This will be particularly useful for partnerships completing the Health Check as a group – such as the partnership Steering Group – and external facilitation may help ensure a participatory and inclusive approach and provide some objectivity to the diagnostic process.

## Introduction

- SFP Phase 3 will focus on the co-production and piloting of practical tools and methods for **facilitating SFP Health Check workshops**
- These tools and methods will then be added to this Toolkit
